

# Cooling Coat Storage & Care Tips

To keep your Easidri Cooling Coat in tip top condition, we recommend:

- 🐾 Always storing it slightly damp in the resealable bag it comes in.
- 🐾 Each time you remove the coat from its packaging and before unfolding it, soak the coat thoroughly in cool water to rehydrate it. This will help avoid tearing any fabric which may have stuck together when it was compressed in storage. Before use, wring out excess water from the coat leaving it slightly damp.
- 🐾 After every use, rinse thoroughly in Easidri's Coat & Towel Wash or a weak solution of household disinfectant (not bleach).
- 🐾 Regularly wash the coat, even if it doesn't look dirty to keep it clean and fresh. This will prevent bacteria growing and the coat smelling musty. You can machine wash the coat at 30°C with Easidri's Coat & Towel Wash, a household laundry detergent (bio or non-bio) or Milton Sterilising Fluid. Do not wash with fabric softener or use bleach. Keeping the coat clean and odour free is not detrimental to the coat's cooling ability.
- 🐾 Do not allow the coat to dry out. Do not tumble dry and there's no need to peg it out to dry! If the coat does dry out, soak it thoroughly in cool water to rehydrate it. The cooling coat should always be kept hydrated when being used.

Dogs should always be supervised whilst wearing the coat and we strongly advise you provide access to plenty of fresh drinking water and create a shaded and safe space for them to retreat to. Please never leave dogs alone in cars, especially during warmer weather.
